

RESIDENTIAL WATER SOFTENERS

TECH SERIES HIGH FLOW SOFTENERS (1.25 INCH FULLY PORTED VALVING)

SWT's Tech Series High Flow Residential Water Softeners utilize ProSoft™ Premium resin. This is the same resin SWT used to treat the water servicing the Capitol Building in Washington DC. Also available is the newest in computer monitoring technology for maximized efficiency. Plus, these systems feature SWT's revolutionary **Cyclonic Distributor System™** to provide full bed contact, less channeling, and superior backwashing (see reverse side).

- **100% corrosion-free** system with attractive all black components
- **Energy efficient** controller uses less than \$5.00 of electricity per year
- Never lose system memory and timer clock to power failure — **no battery required for backup!**
- **Automatic variable reserve** based on water usage history
- All units include **upper screen, brine safety float, brine well overflow connection, brine tank with injection molded lid, brine line tube and connectors**
- **10 year warranty** on tank, **5 year warranty** on valve
- All components **NSF listed**
- All **international voltages** available

All units are supplied with ProSoft™ Premium 8% crosslink resin. Resin substitutions are available on request at extra cost.

Resin ratings are as follows:

	CROSSLINK	CaCO ₃ CAP @ 15 lb/cu.ft.
ProSoft™ Gold	7%	32,000
ProSoft™ Premium	8%	33,000
ProSoft™ Fine Mesh	8%	34,600
ProSoft™ Heavy Duty	10%	35,600
ProSoft™ High Porosity	12%	28,000

In basic terms, crosslinkage refers to the resin beads' physical strength or ability to withstand chemical attack from chlorine, resin bed cleaners, and caustics used in DI applications.

SWT's Water Treatment Systems Include CYCLONIC DISTRIBUTOR SYSTEM™

- Up to 30% less backwash flow rate is required...conserving water for the customer.
- Distributor plate is designed for more than 6,500 lb load capacity.
- Reduces system pressure loss while increasing flow and efficiency through the bed.
- Available for 7, 8, 9, 10, 12, 13, 14, and 16 inch systems.

This environmentally friendly design offers the most efficient service and backwashing characteristics available — reducing the amount of water to drain in backwash, while increasing the overall filtration capacity of a system.
